

# Find Angle MBC

## Problem Statement

$\triangle ABC$  is a right triangle,  $90^\circ$  at  $B$ .  
Therefore,  $\angle ABC = 90^\circ$ .  
Point  $M$  is the midpoint of hypotenuse  $AC$ .  
You are given the lengths  $AB$  and  $BC$ .  
Your task is to find  $\angle MBC$  (angle  $\theta^\circ$ , as shown in the figure) in degrees.

## Input Format

The first line contains the length of side  $AB$ .  
The second line contains the length of side  $BC$ .

## Constraints

$0 < AB < 100$   
 $0 < BC < 100$   
Lengths  $AB$  and  $BC$  are natural numbers.

## Output Format

Output  $\angle MBC$  in degrees.  
*Note: Round the angle to the nearest integer.*

## Examples:

If angle is  $56.5000001^\circ$ , then output **57**.  
If angle is  $56.5000000^\circ$ , then output **57**.  
If angle is  $56.4999999^\circ$ , then output **56**.

$0^\circ < \theta^\circ < 90^\circ$

## Sample Input

```
10
10
```

## Sample Output

45°

**NOTE: Python 3 is disabled for this challenge.**
